EDUCATION

University of Wisconsin-Madison

Madison, WI

Master of Science in Information Systems (MSIS)

Jan 2026 – May 2027 (Expected)

GPA: 3.67/4.0 | **Coursework:** Intro to Artificial Intelligence, Intro to Analytics, Database Design

Christ University

Bangalore, India

Bachelor of Computer Applications (BCA)

2017 – 2020

GPA: 3.83/4.0 | **Coursework:** Database Management Systems, Data Structures, Software Engineering

SKILLS

Programming & Query Languages: SQL, Python (Pandas, scikit-learn), Scala

Data & AI: Data Analysis, Feature Engineering, LLMs (Claude API), Autonomous Agents, Apache Spark, Apache Kafka

Product & Program: Requirements Definition, Backlog Ownership, Roadmapping & Prioritization, Agile/Scrum, Kanban, SAFe, Stakeholder Management

Analytics & BI: Power BI, Tableau, Azure DevOps, Dashboard Design

Technical: ETL/ELT (Qlik, SAP BODS/HANA/LT), Azure Data Factory (ADF), PostgreSQL, Git/GitHub

Certifications: Certified Scrum Master (CSM)

WORK EXPERIENCE

ExxonMobil

Bangalore, India

Scrum Master

Aug 2025 – Dec 2025

- Owned end-to-end backlog and requirements definition for **3 Agile teams (30 engineers)**, translating business objectives into user stories and acceptance criteria across **Qlik, Fivetran, SAP SLT, ADF, and SAP BODS** data-pipeline integrations.
- Worked directly with engineers to scope and prioritize solutions, using **SQL**-based analysis of sprint and pipeline data to make data-driven prioritization calls, lifting sprint velocity **45%** and cutting backlog volume **40%**.
- Facilitated **PI Planning** with Product Owners and Program Managers under a **SAFe** framework, aligning roadmaps across **5 concurrent integration projects** and surfacing delivery risks early.
- Built **5 Azure DevOps** and **Power BI** dashboards adopted by **25+** stakeholders across engineering and business leadership, translating sprint health and pipeline status into executive-ready metrics.

Data Integration Engineer

Nov 2022 – Nov 2024

- Built and maintained **20+** ETL pipelines (**Qlik, SAP BODS, SAP LT**) supporting production operations, technology enablement initiatives, and proof-of-concept integrations across cloud and on-premise environments.
- Led requirements gathering and stakeholder coordination for end-to-end data migration projects spanning **12** SAP source systems, including **ECC, BW, and HANA**, administering **SOWs** and managed-service provider (MSP) performance across delivery timelines.
- Wrote **SQL**-based cross-database comparison and reconciliation logic in **SAP Solution Manager** to close data-consistency gaps between source and target schemas, cutting manual reconciliation effort by an estimated **70%** and reducing governance risk.
- Partnered with security and compliance stakeholders to define audit remediation requirements and **SSL** policy standards across the ETL application portfolio, closing **100%** of flagged audit findings.

Privilege Access Analyst

Aug 2020 – Oct 2022

- Defined access-control policies and technical requirements for secrets management (**CyberArk**) across **8+ business lines**, partnering with security stakeholders on enterprise identity-lifecycle design.
- Delivered **Power BI** reporting on **MSSQL** data across multiple dashboards, enabling data-driven access-review decisions covering **100%** of platform review cycles for leadership.

PROJECTS

[1] **Streaming Content Engagement & Recommendation Pipeline** - 2026 | Apache Kafka, Spark Structured Streaming (Scala), PostgreSQL, Python, FastAPI

Hands-on build of an end-to-end data platform: prototyped and validated the pipeline design solo, then shipped a **Spark Structured Streaming (Scala)** job consuming a 6-partition **Kafka** topic with windowed aggregation, verified at **800 events/sec with zero data loss**. Modeled a star-schema warehouse (**PostgreSQL**) with **SQL** analytics surfacing engagement and retention **insights**, and shipped an **ALS recommender** and churn classifier behind a live **FastAPI** feature endpoint – the full design-build-launch-iterate loop, solo.

[2] **VizGen – AI-Powered Dashboard Builder** - 2026 | Python, Claude API, Plotly, Streamlit, SQLite

Identified a recurring requirements bottleneck in enterprise BI workflows – business users could describe a need but not configure a chart – and shipped a natural-language dashboard generator end-to-end, solo. Prioritized and built a feature roadmap covering **dashboard version control**, **AI-generated executive summaries**, and no-login shareable URLs; live in production at vizgenanalytics.streamlit.app.
